

Bridgewater Gigafactory

Frequently asked questions

What works are taking place?

Agratas is working with utilities service provider JSM Group to bring an underground power supply from Bridgewater Substation to the Agratas site. Setting up the power supply will involve temporary disruption to traffic on some roads in the area.

What have you done to reduce the disruption of the works?

We are working closely with the Somerset Council Street Works team and JSM Group to set up temporary measures to manage traffic along these routes to minimise disruption to residents and road users. Alternative routes will always be available and will be indicated via diversion signs along the route and residents will be able to access their properties.

A member of the team will always be available on site while works are taking place for residents to speak to with any questions regarding the works or the diversions that have been put in place.

Will works disrupt waste and recycling collections?

The works will not disrupt any waste and recycling collections. We have created areas for vehicles to pull in to collect waste and recycling according to usual schedules.

How will emergency vehicles get through the closed roads?

We have engaged with all the local emergency services ahead of all road closures. We've addressed any concerns, and all parties are aware of our plans so that any route changes are factored into emergency routes.

How are you informing the local and wider community?

All residents who will be immediately affected by the closures have been contacted via letter and we have also engaged with local businesses before commencing any work.

Where can I find out more information?

If you have any queries, please contact Leon Scrivens, Project Manager, on 07929 667 987, or Nick Ward, Contracts Manager, on 07515852 984.
